PRODUCT DESCRIPTION

RAREZEL 904 is a non-staining, Non-Emulsifiable and water displacing rust preventive that will not emulsify even in the presence of alkali. It meets US MIL-C-22235 specifications for non-staining property and US MIL-C-16173D Grade 3 soft film solvent cut black, cold application corrosion preventive compound.

RAREZEL 904 deposits a thin film that is not messy to handle and will not bleed through wrappings, boxes and packaging materials. It is applied as a volatile indoor storage or transit where it would be subjected to corrosion agents for at least 12 months. It is widely used as rust protection where heavy messy coats are not favorable.

RAREZEL 904 incorporates five in one function as it acts as penetrant, rust remover, moisture displacer, rust preventive and gun bore cleaner.

RAREZEL 904 dissolves rust deposits on the surface of the metal without hurting the metal. Heavily rusted guns, artillery and automotive parts, may be dipped in the solution for long periods of time without harmful effect on sensitive components because **RAREZEL 904** is a non-acid base, biodegradable solution specifically formulated to meet military applications on preservation and maintenance of weapons and automotive parts.

RAREZEL 904 is used for bore cleaning of small arms and heavy artillery. It removes rust, dissolves powder residue, displace water and moisture, and protects the metal from corrosion even exposed under severe conditions.

TYPICAL PROPERTIES

TYPE OF FILM:
Thin Polar

FLASH POINT:
140°F (60°C)

PROTECTIVE PROPERTIES:
Against humidity and
oxidation

MODE OF APPLICATION:
Dipping, spray, brush

MODE OF REMOVAL:
Cleaning solvent or
reducers

REMOVAL

USE CLEANING SOLVENT
OR REDUCERS

REMOVAL

Keep away from heat
and open flame.

Use in well-ventilated
areas.

Avoid prolonged skin
contact.

Keep out of reach of
children
